UNILATERAL FIXATOR

**Abstract of the Disclosure** 

A unilateral external fixator device that allows for gross manipulation and fine

adjustment of deformities in six degrees of freedom. The device may comprise a strut

assembly and two compound movable joints, one at each end of the strut assembly. One

compound movable joint may comprise two revolute joints, each containing a gear

reduction mechanism and may rotate about the strut. The second compound movable

joint may contain two revolute joints, each containing a gear reduction mechanism, and

may move along the length of the strut assembly. The gear reduction mechanisms may

comprise helical spline assemblies that allow for gross and fine adjustment of the fixator.
